CONSULTATION:

You will meet with one of the gastroenterologists who will discuss your digestive health problems with you.

GASTROSCOPY / COLONOSCOPY

Gastroscopy allows the endoscopist to comprehensively examine your oesophagus, stomach and duodenum using an endoscope equipped with a video camera. Colonoscopy allows the endoscopist to examine the large intestine using an endoscope.

Patients referred for a colonoscopy will need to collect a bowel preparation kit and further instructions from us three days prior to the appointment.
